To Whom It May Concern:

OSHA regulation relating to Blood borne Pathogens (29 CFR, Part 1910, 1930), require that institutions protect employees from contact with blood and infectious waste. Additionally, Department of Transportation regulations contained in 49 CFR, sections 173.386 and 173.387, state that etiologic agents, diagnostic specimens, and biological products may not be transported.

In order to comply with Federal law, Mizuho OSI requires that products sent for repair or return be clean and disinfected from blood and infectious waste, certified that the product has not been used, or was removed from an enclosed area that protected the product from blood and infectious waste.

By signature and marking of the appropriate block on this Certificate of Disinfection, I certify the following:

- The returned product(s) have been cleaned, decontaminated, and/or terminally sterilized
- (OR) The returned product(s) are unused
- (OR) The returned product(s) were removed from a protected environment.

**NOTE: These products will be inspected upon return, if the product is not returned clean and disinfected from blood and infectious waste, a charge of \$2,000.00 for cleaning and decontamination will be billed to the hospital**

**Statement of New, Protected, or Cleaned and Decontaminated Verification:**

The undersigned verifies all returned products meet disinfection requirements as stated above.
